Comparative Study between Superiorly Based Pharyngeal Flap and Sphincteroplasty in Treatment of Velopharyngeal Insufficiency after Cleft Palate Repair

AL H. HASS B, M.D.

The Department of Pediatric Surgery, Faculty of Medicine, Cairo University.

ABSTRACT

Background: Despite technic \underline{i} and \underline{i} nees in c eff $\underline{p} \underline{i}$ are replifs, the post-surgic \underline{i} de e op ent of $\underline{p} \underline{i} \underline{i} \underline{j}$ fistu \underline{s} and \mathbf{V} \mathbf{H} is not unco on. Approxi \underline{i} e \underline{y} 20-38% of chi dren \underline{v} ho undergo c eff $\underline{p} \underline{i}$ are pair de e op e oph gynge \underline{i} insufficiency \mathbf{M} \mathbf{H} . Surgic \underline{i} ter gion of the \mathbf{V} P sphincter is directed \underline{i} decreasing the horizont \underline{i} cross-section \underline{i} surf ce ge to the sphincter is tissue ound gies \underline{i} his c \underline{n} e while ed \underline{v} the interposition of pedic ed ph gynge \underline{i} for \underline{i} (sp itting one gree port into \underline{v} , os \underline{i} er one or repositioning the posterior and ger \underline{i} orders of the sphincter \underline{v} tissue for \underline{s} (Sphincter) of uscu o ucos \underline{i} tissue for \underline{s} (Sphincter) sty

The Aim of this Work: \$ s to cop ge results of ph gyngop sty and superior y ged ph gynge f gp in the treigt ent of e oph gynge insufficiency gter c eft pigge rep gr.

Patients and Methods: A r ndo group of \mathbb{K} , enty- \mathbb{K} , o p gients, ith P fier c eft p ge rep $\mathbb{I}^{\mathbb{K}}_{\mathbb{K}}$ s studied. P gients were prone to three di gnostic procedures g phoni gric c inic, preoper gi e y: $-F \in \mathbb{N}$ eft er optic n soph gyngoscopy. 2-N so etric e gu gion. 3-4 pe recording. P gients were c ssified into \mathbb{K} , o'r ndo groups; for p gients ph gyngop styw g done. Superior y ged ph gynge f $\mathbb{D}^{\mathbb{K}}_{\mathbb{K}}$ g done for the rest of the p gients. N go etric e gu gion nd t pe recording were repe ged gter phonother py (3- onths postoper gi e y) nd percent ge drop in n go eter for n g g nd o g sentences were c ged gter 3-4 onths postoper g ti e y.

Results: In group 1.3 p gients h d persistence of n g_{\pm} tone postoper gi e y (w o p gients h d g e d i pro e ent nd one p gient h d ini g i pro e ent gi ing incidence of co p ic gions 2.3%. According to results of postoper gi e t pe recording of this group. 8 p gients were c gegorized g good results. Wo g oder ge nd one g poor result. In group 11. one p gient h d p gi denistence find persistence of n g_{\pm} tone postoper gi e y, 4 w o p gients h d hypon g_{\pm} ity, one of the de eoped seep pne incidence of co p ic gions in this group w g 2.3%. According to results of postoper gi e t pe recording in this group. 9 p gients were c gegorized g good results, one g oder ge nd one g poor result. Percentge drop in n go eter in n g_{\pm} sentence in group 1 & 11 w g 35.55% nd 2.1% respectie y. Percent ge drop in n go eter in or g sentence in group 1 & 11 w g 5.95% nd 9.% respecti e y. Conclusion: Both sphincter ph gyngop sty nd superior y sed ph gynge f g pro ed to e effecti e in tre g ent of e oph gynge insufficiency with scepted incidence of co p ic gions. Sphincter ph gyngop sty h gl etter resu ts in p gients with good p g g g nd ger ph gynge with g o eents on preoper gi e ideoendoscopy. Superior y sed ph gynge f g h gl etter resu ts in p gients with poor p g g g nd ger ph gynge with g o e ents on preoper gi e ideoendoscopy.

INTRODUCTION

Y e oph gynge insufficiency M P inc udes ny structure and or neuro uscullet disorder of the eul and or phigynge we is it the e e of n soph gyns in which interference with nor sphincteric closure occurs. P insufficiency M P y result from the ic, yoneur is ehe ior is or ico in tion of disorders. It is di gnosed clinic y y iconste gion of sy pto s that includes p tho ogic y incurred n se reson nee (hypern seity) is griculation, escipe of ir through the nose (n se elissions) and i err ant ficie o elents (grill).

A he source of P y e p te th t is structur y deficient (e.g., too short or c ing use e u) P ech nis th t is neuro ogic y i p ired (e.g. cere r p sy, y stheni gr t is he d in uries nd cere ro scu r ccidents) or the resu t of f u ty e ming (e.g. phone e-specific n s t e ission) Most co on y, how e er, the p stic surgeon i encounter P in the postp top sty [2].

Despite technic \pounds d nces in c eft p \pounds te rep p irs, the post-surgic \pounds de e op ent of p \pounds the fisture and P is not unco on. Approximate y \pounds -38% of chi dren who undergo c eft p \pounds te rep ir de e op P [3]. In 805, fter det i ed study of P physio ogy, P ss i int is the first to tether the u u to the physician in ite pt to restore to petent u r ech nis during speech. Since that ti e the use of re o i e de ices designed correct the V PI, iso inu er of surgic procedures hie een de ised to restore the physio ogic c osure of this sphincter-i e ech nis [4].

Surgic , ter tion of the P sphincter is directed t decre sing the horizont cross-section surf ce re of the sphincter's tissue ound ries. A his c n e chie ed y the interposition of pedic ed ph rynge f ps (sp itting one rge port into to os er one or repositioning the posterior nd ter orders of the sphincter y the introduction of uscu o ucos tissue f ps (Sphincterop sty) [5].

A he ph gynge f p h s pro e een the sing e ost popu f ethod of tre ging indi idu s with P o er the p st & o dec des A he procedure s initie y descri ed in the 9th century and ger refined y surgeons such s Rosenth P dgett, S n nero-Rosse i and Cork y [6].

Hynes initi y descri ed sphincterop sty in 950, ut its use in \P p ge ent h s on y recent y eco e popu g s result of odific gions y Orticoche g nd s son [7].

A he i of this or is to co pige results of pharyngopisty and superior y is sed pharynge i f poin the treat ent of e opharynge insufficiency after c eft pi at erepair.

PATIENTS AND METHODS

Ar ndo group of & enty-& o p gients ith P fter c eft p ge rep gr & s studied in the Dep rt ent of Pedi gric Surgery, C gro ni ersity nd in He gring nd Speech Institute.

 \mathcal{A} he study \mathcal{A} is conducted during the period frou y 2000 to M arch 200 2.

Fu history & s o t ined fro e ch p fient w ith physic est in fion stressing on sence of fistu hypern s ity, n s e ission or regurgit t tion, co pens fory is ricu fion and f ci gricing, A ype of p f f e f e s c uded s in ost c ses it s f difficut to e sure of it.

Patients were Prone to Three Diagnostic Procedures at Phoniatric Clinic, Preoperatively:

- Flexible fiber optic nasopharyngoscopy: Fo-% ing Groft et 2. [8] p tients ere c ssified into four c tegories.

- Short p te. good p t t o e ent, poor or i ited ter ph tynge to e ent, ± posterior ph tynge to e ent.
- Good ter ph gynge w to e ent, poor pt te e tion, ± posterior ph gynge w to o e ent.
- c-Short p te. rge Pg p. nd good p t t nd der ph rynge to e ent. ± posterior ph rynge to e ent.
- d-Li ited or poor o e ent of the p t ge and ger t and posterior ph gynge two t s.
- 2- Nasometric Evaluation: N so eter is the ice for c cu ting the r tio etc een the n s t nd or t output (percent n s t nce) It consists of three for su units:
 - N s 2 and or 2 icrophones.
 - 2- E ectronic circuits for processing the icrophone sign s.
 - 3-A person 2 co puter for c 2 cu ging n 5 2 nce 2 ues.

A short si p e \mathbf{g} ic n \mathbf{g} sentence \mathbf{g} d or \mathbf{g} sentence \mathbf{g} d or \mathbf{g} sentence \mathbf{g} ere used.

Percent n
$$s$$
 and $ce = \frac{N}{N+O} \lesssim 00$

3- Tape recording: According to resu ts of postoper gi e t pe recording, p gients, ere c gegorized s good, oder ge nd poor resu ts.

P tients were c ssified into worndo groups; for p tients ph tyngop styw s done technique used s it that descriped y c son and Si erton [7]. Superior y sed ph tynge f pw s done for the rest of the p tients. Mich c S do e et t. [9]. Both techniques te show n in i ustrations (Figs. .5)

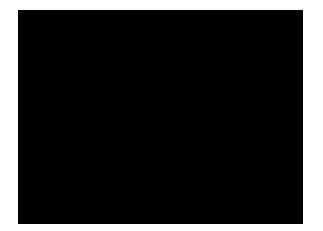

Or feeding % s of ed 2 hours postoper ti e y nd p tients % ere disch ged 8 hours postoper ti e y.

Phonother py st g ted one onth postoper g i e y for g p g jents g nd continued for six sessions.

N so etrice λu gion nd t pe recording were repeated fter phonother py (2- on the postoper give y) nd percent ge drop in n so eter for n s λ nd or λ sentences were c λ cu ged.

Fexi e fi er optic n soph gyngoscopy $\frac{1}{2}$ s repe ged fter 3-q on the postoper gi e y.

A p gients we ere for one ed regu g y e ery 2 we es \mathcal{A} he e gst period of for $\mathcal{O}_{\mathcal{A}}$ -up $\mathcal{O}_{\mathcal{A}}$ g 5 on ths with e g period of 0. on ths.

DISCUSSION

E en in this odern er of p t t procedures th t incorpor te p t t engthening ind intr t e r uscu rep ir, the incidence of P h s een reported s high \$38% in so e series [10].

A co prehensi e ssess ent of e oph gynge λ function in o es oth perceptu speech ad a instru ent λ e λ u gion d re g ent str gegies sed on on y one of these ssess ents re prone to f g ure [11].

In this study ssess ent of e oph gynge the function $\frac{1}{2}$ sed on pre ad postoper gi e findings of f e si e fi er optic n soph gyngoscopy, n so etric e tu gion and t p recording.

It is difficult to udge the degree of n s ity y istening to speech. For this, n so eter is usefu de ice to co ent upon the degree of e oph gynge insufficiency and to co p ge est een pre and postoper gi e n s ince to udge upon the i pro eent of the p gients.

In ide circu st nces, the go of surgic n ge ent is to e i in te the sy pto s of hypern s ity nd add en s e ission, A he extent towhich this go is re ized depends on n pprecition of the preoper ti e P n to y, physio ogy, nd ine tics nd the ppropri teness of the ph tyngop sty that is perfor ed [12].

tizing the superior constrictor use e nd ucos fro the posterior phynge w ...
pedic ed f p is cre ted that inserts into the soft p ted his results in the perment id ine connection ewe een the n soph gyns, and oroph gyns, which isects the P port into w o ter ports [13].

A he intr oper gi e use of ru er c gheters with now n di e eters and wide ph gynge f p is co on y used to cre ge ger ports thig i to gint in the de ic ge for a cell et a cooroph gynge p gency and glequ gev P function. Intr oper gi e o er tightening of the port coined with sc g contrigue. how e er, runs the ris of n s give y o struction and seep one d here is current y gre ger interest in indi idu gizing f p width to the g ount of ger ph gynge w g otion present r gher than to spredeter ined port size.

Studies h_{\pm} e show n success r ges for ph gynge \pm f p surgery of 80 -90 %, 4 he c sific gion success depends on the in estig gor. Cert in studies c sify p gients ith hypo n s ity s success. Other studies c sify post surgic \pm hypo n s ity s of g ure. In these studies, the success r te is so e, h t o, er [9]. In this study the success r te of superior y sed ph rynge t f p is 2. %. In this study, if

c ses ith post surgic hyporn $\frac{1}{2}$ ity ere c ssified s success, the success r te of superior y sed ph gynge f p i e 90.9%, this y exp in the ide r nge of success r te in different series.

Ph gynge f gs c n e d ngerous if perfor ed in p gients with unusu f y n grow upper it wys. P gients requiring surgic f P n ge ent who h e ris f ctors for upper it y o struction ge preferenti f y reco ended for sphincter ph gyngop sty sed on reports of its ini f effect on the give y [14,15].

i e the ph rynge f p, the sphincter ph ryngop sty is f p ati circu ferenti n $gro_{4'}$ ing th f occ udes the ger f and posterior spects of the e oph rynge port ut int ins the centric opening [16].

Sphincter ph gyngop sty h s can ssoci ged w ith ∞ er success r ges of 0 - 0%. c son st ged th g the success r ge c n re ch^o pproxi ge y 80% w ith ppropri ge p gient se ection [7].

In this study sphincter phygop sty $\frac{1}{2}$ sperfor ed for p tients, three p tients out of h d persistence of n s, tone gi ing incidence of co p ic tions 2.3% and success r te 2.%. It is i port at to ention that: the three p tients h d poor p, t, and ter, phyge $\frac{1}{2}$, o e ents on preoper ti e ideoendoscopy.

In group II (p tients for ho superior y sed ph gynge f p) the b op tients ho de e oped hypon s ity h d good p t t nd ter ph gynge the o e ents on preoper tie ideoendoscopy.

A ing in consider gion the re gi e y s nu er of p gients in this study, sphincter ph gyngop sty h d etter resu ts in p gients ith good p g g nd ger ph gynge w i o e ents on preoper gi e ideoendoscopy. A so, superior y ged ph gynge f p h d etter resu ts in p gients

with poor p a f and fer the fynge the o eents on preoper fi e ideoendoscopy.

Conclusion:

We oph rynge insufficiency is correct e condition in ost instances if it has een carefu y e au ged preoper gi e y and the appropriate surgica correction is perfor ed successfu y for ow ed y speech ther apy and for ow s up. Both sphincter ph gyngop sty ind superior y sed ph gynge if ip pro ed effecti e in tre g ent of e oph gynge insufficiency with scepted incidence of co p ic gions.

A ing in consider gion the re gi e y s nu er p gients in this study, sphincter ph gyngop sty h d etter resu ts in p gients with good p g g g g g d ger ph gynge g w g o e ents on preoper gi e ideoendoscopy. Superior y ged ph gynge f p h d etter resu ts in p gients with poor p g g g g h d ger ph gynge g w g o e ents on preoper gi e ideoendoscopy.

A he success r te of rep ir of $\mathbf{V} \mathbf{P} \mathbf{I}$ c \mathbf{n} e i proved y seecting the ost appropriate procedure sed on the \mathbf{n} to \mathbf{y} and \mathbf{o} e ent of the $\mathbf{V} \mathbf{P}$ port.

A he gre gest future ch enge. therefore, is to de e op and coordin ge u ticenter r ando ized contro ed studies to e u ge tre g ent outco es.
A his, ou d id gre g y in producing etter gch es, een differenti di gnosis and differenti an ge ent.

Additionally and Lastly: A he co prehensi e te pproch gi es the chi d c eft p te the gre test opportunity for est outco es.
